Semen Quality and Penile Visual Analysis

Date: 17-03-2023
Stud: Mayura
Owner: Mayura Station
Location: Millicent, SA

Bull ID: **S114**

The semen from the above bull was evaluated microscopically and has found to meet the required standards for progressive motility, concentration, morphology and percentage of live sperm. The bull achieved normal erection with no evidence of injury.

Note to purchaser:

- Introduce new bulls with pre-owned bulls in adjoining paddocks. Survival mode and stress events can cause injury and impact future fertility.
- Confirm correct **technique and thrust** during first service
- Manage risk through **bull rotation** where possible
- Obtain **insurance** on your bull to claim on unforeseen fertility loss (e.g injury, death or disease inc. testicular degeneration)
- **Broken, injured, infected or swollen penis?** Rest your bull immediately. Treat with long acting penicillin and anti inflammatory. Call to retest before use.
